Application for Data Scientist (w/m/d)

Dear WEFRA LIFE team,

I am writing to apply for the Data Scientist position at WEFRA LIFE. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with classic machine learning and statistics on one side and generative AI on the other.

My clearest data science project was at Covestro, where I predicted prepolymer synthesis outcomes such as viscosity from time-series process data. I prepared the data with Pandas and NumPy, engineered lag features and rolling statistical windows, and compared Random Forest, XGBoost and LSTM models against the chemists' empirical curve fitting. The models identified batches likely to go off-spec earlier, and a Streamlit dashboard let the chemists try parameter changes and see the prediction before running a physical batch. That last step mattered most to me: a model only helps once the people who own the decision can use its result.

Since then I have mostly built with large language models. At Kniit, a start-up for the German energy sector, I was the only developer of an agentic knowledge-extraction system and reported directly to the CTO. I evaluated the pipeline against a ground truth derived from SAP system data, which took precision and recall from 33% and 45% to 93% and 90%. I also questioned whether an LLM was needed at all: for a high-volume data stream, a code-based pipeline cut a projected $200,000 LLM budget to near zero. My master's thesis was on evaluation too: automated RAG metrics with RAGAS and PytrecEval and a benchmark of embedding models on over a million text chunks.

WEFRA LIFE interests me because your data team sits next to strategists, PR and creative people in a healthcare agency, so analyses turn into campaigns and advice for real health brands. Marketing analytics and recommender systems would be new to me, but the method carries over: define the problem, measure against ground truth and explain the result to the people who decide. I am including the short project description you ask for as a work sample.

I will be based in Frankfurt, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent and my German is B1. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
