Application for AI Full Stack Engineer

Dear Hiring Team,

I am writing to apply for the AI Full Stack Engineer position at Almedia. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer of an agentic system for domain experts in the German energy sector, from the Python back end to the React screen they work in.

At Kniit I built the knowledge-extraction pipeline for German energy-sector documents on my own, reporting to the CTO. It runs four LangGraph agents in parallel for entity extraction, relationship analysis, consolidation and reflection. Scored against a ground truth taken from SAP data, precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume source I replaced the LLM calls with deterministic code, which cut a projected $200,000 LLM budget to almost nothing. That is how I think about durable AI workflows: use the model where it earns its place, measure it, and keep the rest as plain code you can trust when the next model arrives.

The work was full stack. I built Expert Interface, a React front end on Python microservices, deployed on Azure, where experts validate and approve changes to the knowledge graph. Data sat in Postgres, MongoDB and Neo4j, and I exposed the graph through an MCP service that Claude Code queries in milliseconds. At Covestro I shipped a LangGraph application with a React front end and a FastAPI back end, containerized with Docker and deployed to AWS with CDK, with GitLab CI/CD. My production back ends are Python; I have not used Node.js or TypeScript in a job yet and would pick them up on your codebase.

Much of the job was sitting with people who are not engineers. As an AI consulting intern at Covestro I mapped how business teams made decisions and where an agent could help, and that shaped what I built. At Kniit I worked with SAP domain experts and built Expert Interface so they could check and approve what the pipeline extracted. I would like to do the same with your marketing, UA and operations teams.

Almedia interests me because it is a profitable, bootstrapped company where internal AI tools can show their value quickly. With Freecash, a community of 95 million users and, since last year, zave.it, there are many teams and data sources to connect, which is exactly the kind of fragmented setup I like working in.

I will be based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
