Application: Agentic AI Developer, Deloitte aiStudio

Dear Talent Acquisition Team,

I am writing to apply for the Agentic AI Developer position in the Deloitte aiStudio. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and over the last two years my focus has moved to agentic AI.

Agentic AI is the core of my current role at Kniit GmbH, where I am the only developer on a knowledge-extraction pipeline for the German energy sector. It runs LangGraph agents for entity extraction, relationship analysis, consolidation and reflection in parallel. I took precision and recall on regulatory documents from 33% and 45% to 93% and 90%, measured against ground truth taken from SAP systems. Before that, at Covestro, I built an agentic LangGraph application that decides whether a request needs a vector search, general inference or a summary.

You mention MCP and AI coding assistants such as Claude Code. I built an MCP service that gives agents fast access to our knowledge graph, with retrieval in milliseconds, and connected it to Claude Code, which I use for my own development with skills I wrote myself. My backends are usually FastAPI with a React frontend.

I have taken applications from the first requirements through to deployment. At Covestro I containerised an agentic stack with Docker, deployed it to AWS with CDK and kept it in GitLab with a CI/CD pipeline. For a RAG evaluation project there, I set up Lambda, SQS and DynamoDB to run RAGAS and PytrecEval evaluations automatically. At Kniit, our graph curation app for domain experts runs on Azure.

Part of solving a problem well is knowing when not to use an LLM. For a second, high-volume data source at Kniit, I built a deterministic pipeline in code instead, which brought a projected $200,000 LLM budget down to almost no running cost.

What draws me to the aiStudio is the work of your Business & Technology Center. Compliance, contract management and project risk all depend on knowledge buried in long, complex documents, and that is exactly the problem I have been working on. I would like to solve it for Deloitte's clients.

I live in Essen, am open to any of your locations, hold an EU Blue Card and can start on 15 November 2026. I work in English at business level, and my German is currently B1.

Thank you for considering my application. I would be glad to talk about how I could contribute to your team.

Kind regards,

Chandu Prasad Bhairapu
