Application: Junior Applied AI Engineer

Dear Hiring Team,

I am writing to apply for the Junior Applied AI Engineer position at Accenture. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of my recent work has been production software that calls LLM APIs and connects to agentic backends.

At Kniit GmbH, I am the only developer on an LLM-based knowledge-extraction pipeline for the German energy sector, built on LangGraph agents that run in parallel. Working with LLMs in live code taught me to watch cost as closely as quality. For a second, high-volume data source I built a deterministic pipeline instead of using an LLM, which brought a projected $200,000 LLM budget down to almost no running cost.

I don't rely on AI output until I have measured it. At Kniit I took precision and recall from 33% and 45% to 93% and 90%, checked against ground truth from SAP systems. At Covestro I automated the evaluation of a RAG system with RAGAS and PytrecEval, comparing its answers with ground truth from the company's chemists.

AI coding assistants are a normal part of how I build. I build with Claude Code and skills I wrote myself, and I connected it to an MCP service I built that gives agents millisecond access to our knowledge graph.

On the full-stack side, I built a React and FastAPI application at Covestro around an agentic LangGraph backend, containerized it with Docker, deployed it to AWS with CDK and kept it in GitLab with a CI/CD pipeline. At Kniit I also built Expert Interface, a React app with a Python microservices backend on Azure, where domain experts review and approve changes to the knowledge graph.

Accenture's partnership with Anthropic is a big part of why this role appeals to me. Accenture has a dedicated Anthropic Business Group and tens of thousands of developers already working in Claude Code, so I would be joining a team that builds the way I already do, with a clear route into forward deployed engineering on client projects.

I live in Essen, hold an EU Blue Card and can start on 15 November 2026. I work in English at business level, and my German is currently B1. I am happy to travel to client sites whenever a project needs it.

Thank you for considering my application. I would be glad to walk you through the Kniit pipeline and the cost tradeoffs behind it in an interview.

Kind regards,

Chandu Prasad Bhairapu
