Application: Junior AI Engineer

Dear SNOCKS Team,

I am writing to apply for the Junior AI Engineer position at SNOCKS. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part I enjoy most is turning a rough AI prototype into something a team actually uses.

At Kniit GmbH I am the only developer on an LLM-based knowledge-extraction pipeline for the German energy sector. I built it end to end: Python and LangGraph agents that run in parallel, the prompts, the indexing and the data flow behind them. I also built an MCP service that makes our knowledge graph available to AI agents and to Claude Code, which I build with, using skills I wrote myself.

I don't trust an AI result until I have measured it. I tested the extraction against ground truth from SAP systems and raised precision and recall from 33% and 45% to 93% and 90%. Cost matters as much as quality: for a second, high-volume data source I built a deterministic pipeline instead of using an LLM, which brought a projected $200,000 LLM budget down to almost no running cost.

A lot of my work is wiring systems together. At Covestro I built a FastAPI REST backend and a React front end around a LangGraph agent, packaged it with Docker and deployed it to AWS with CDK and a GitLab CI/CD pipeline. I also like building tools that non-engineers can use on their own. At Kniit, domain experts approve knowledge-graph changes in a web app I built, and at Covestro chemists used my Streamlit dashboard to test parameter changes before running a batch. I haven't worked with BigQuery or Shopify yet, but I work with SQL and Postgres and know AWS data services well and pick up new tools quickly.

SNOCKS has grown from one sock brand into a house of four, partly by taking over OCEANSAPART and femtis. Every new brand adds tickets, systems and reports to the same company setup, which is where good automation saves the most time. I like that you look at the whole setup rather than a list of separate projects.

I live in Essen, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level, and I am happy to work remotely or from Mannheim, Hamburg or Berlin.

Thank you for considering my application. I would be glad to show you how I measured and improved the Kniit pipeline in an interview.

Kind regards,

Chandu Prasad Bhairapu
