Application: AI Engineering & Automation Specialist

Dear Florent,

I am writing to apply for the AI Engineering & Automation Specialist position at Cloover. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I spent the last year building agentic AI for the German energy sector. This role sits right where my last year of work was: AI automation for the energy sector.

At Kniit GmbH I am the only developer on an LLM-based knowledge-extraction system for the energy sector. It runs LangGraph agents in parallel, with entity-extraction, relationship, consolidation and reflection agents. I tested it against ground truth from SAP systems and raised precision and recall from 33% and 45% to 93% and 90%. Retrieval and evaluation were also the core of my master's thesis at Covestro, where I benchmarked embedding models on more than a million chunks of internal data and automated RAG evaluation with RAGAS.

At Kniit I also built an MCP server that gives AI agents millisecond access to the knowledge graph, connected it to Claude Code, and wrote my own Claude Code skills for our development workflow. That is the same kind of work as the MCP servers and Claude Code skills you describe.

I also care that people actually use what I build. At Kniit, domain experts review and approve changes to the knowledge graph in an internal web app I built. At Covestro I built a Streamlit tool for chemists to test parameter changes before running a batch. My code is mostly Python with FastAPI, and my front-end work so far is beginner-level React, not TypeScript. I haven't integrated HubSpot, Slack or Notion yet, but I have built FastAPI REST backends behind React front ends for agentic systems. At Covestro I containerized one with Docker and deployed it to AWS with CDK and GitLab CI/CD.

Cloover sells to the installers who put solar panels and heat pumps on roofs, and the Series A and $1.2 billion debt facility from January show how quickly you plan to grow. This role reports into Ops and Energy, where growth like this shows up first, and that is where agents that take repetitive work off people's desks make the biggest difference. I would like to build them in the same room as the people who use them.

I live in Essen, hold an EU Blue Card and can start on 15 November 2026. I am based in Berlin and will work from the office, and my German is at B1 level.

Thank you for considering my application. I would be glad to walk you through the Kniit system and its MCP server in a call.

Kind regards,

Chandu Prasad Bhairapu
