Application for Full-Stack Engineer

Dear Hiring Team,

I am writing to apply for the Full-Stack Engineer position at Arrows. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of that work was software engineering around the models: Python backends, React front ends, databases and deployment.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector and report to the CTO. I also built Expert Interface there, a React front end on Python microservices deployed on Azure, where domain experts review and approve changes to a knowledge graph. Making a complex AI result understandable for non-technical experts is the part of that work I liked most, and it is close to what you describe for lawyers and patent professionals. I write much of this code with Claude Code and my own skills, and I read what the agent produces before it goes in.

At Covestro I worked as an AI consulting intern and turned stakeholder requirements into an application with a FastAPI back end and a React front end. I tested the APIs with Postman, containerized everything with Docker and deployed it to AWS with CDK and GitLab CI/CD. Over the last three years I have built LLM systems end to end: multi-agent extraction with LangGraph that raised precision and recall from 33% and 45% to 93% and 90%, and RAG pipelines evaluated against ground truth from domain experts.

My backend work is in Python, and Postgres is part of the stack I used at Kniit. I have not yet run PostgreSQL at scale in a commercial product, and I have not shipped TypeScript in a job, so those are the areas where I would need to grow fastest. I have also not worked with WYSIWYG editor APIs.

What draws me to Arrows is the combination of a hard domain and a small team. Building the backend foundations for IP teams, with the founders close to customer feedback, and having a say in how the engineering team is set up, is the kind of ownership I am looking for after working in an early-stage start-up.

I am based in Munich, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
