## ABOUT ME

Master's graduate in Artificial Intelligence with 3 years of professional experience in AI engineering and software development. Specialized in agentic LLM features on business data, from multi-agent workflows and RAG to AI evaluation and cloud deployment. Most recently sole developer of an agentic knowledge-extraction system for the German energy sector, backed by strong Python and cloud engineering skills.

## EXPERIENCE

### Associate Generative AI Developer - Agentic Indexing Pipeline Engineer for German Energy Sector

**Kniit GmbH**

November 2025 – present Muldestausee, Germany

- Designed and optimized multi-agent extraction workflows (LangGraph: entity-extraction, relationship-analysis, consolidation, and reflection agents running in parallel) for knowledge extraction from complex regulatory and technical documents, driving precision/recall from 33%/45% to 93%/90% via an SAP-system-derived ground truth.
- Engineered a deterministic (code-based) extraction pipeline for a second, high-volume source stream, cutting a $200,000 projected LLM budget to near-zero recurring cost while pushing extraction accuracy toward 100%.
- Developed Expert Interface, a graph curation web app (React frontend, Python microservices backend) deployed on Azure, giving domain experts human review points to validate and approve knowledge-graph changes.
- Designed and implemented a Model Context Protocol (MCP) query service exposing the knowledge graph through APIs and tool calling for agents, with millisecond-latency retrieval, integrated directly into Claude Code for agentic development workflows.
- Sole developer owning the full knowledge-extraction pipeline end-to-end – data ingestion, chunking, prompt engineering, and indexing (agentic, deterministic, and monolithic strategies) – reporting directly to the CTO and collaborating with SAP domain experts across the German energy sector.
- Shipped LLM-powered features to production as an AI-augmented engineer – leveraging Claude Code, custom skills, and agentic coding workflows for rapid, high-quality development grounded in clean code principles.
- **Tech stack: Python, LangGraph, LangChain, LiteLLM, RAG, GraphRAG, MCP, Vector Search, Neo4j, MongoDB, Postgres, FastAPI, React, Azure, Docker, Kubernetes**

---

### GenAI Developer (AI Consulting Intern) - Development and Deployment of an Agentic AI Workflow

**Covestro Deutschland AG**

December 2024 – April 2025 Leverkusen, Germany

- Worked with business stakeholders to understand their decision-making workflows and translated the requirements into an agentic AI application; designed and deployed it with LangGraph to route decisions across vector database queries, general inference, and summarization tasks.
- Developed a React-based front-end and a Python backend with FastAPI, leveraging Postman for API testing.
- Built and containerized the entire stack with Docker and deployed it to AWS using CDK, adhering to clean code practices. Version-controlled via GitLab, with CI/CD integration.
- **Tech stack: Python, LangGraph, LangChain, FastAPI, React, Postman, Docker, AWS, CDK, EC2, Lambda, GitLab, GitLab CI/CD**

---

### GenAI Developer (Master's Thesis) - Evaluating the Performance of RAG Systems

**Covestro Deutschland AG**

May 2024 – November 2024 Leverkusen, Germany

- Built automated evaluation of RAG generation and retrieval with RAGAS and PytrecEval, comparing model answers to chemist-provided ground truth.
- Built AWS cloud infrastructure with Lambda, SQS, and DynamoDB for PrismaChat RAG evaluation using CDK.
- Benchmarked multilingual embedding models on over 1M data chunks of Covestro's internal chemical data.

- Designed RAG pipelines, focusing on chunking strategies, vector databases, indexing, and fine-tuning models for optimized retrieval.
- **Tech stack: Python, LangChain, RAGAS, PytrecEval, Hugging Face Transformers, PyTorch, TensorFlow, Scikit-Learn, AWS (S3, EC2, VPC, Lambda, SQS, DynamoDB, CDK), Azure AI Search, Docker, Streamlit, Vector Databases**

---

### Data Scientist (Intern) – ML-Based Prediction of Prepolymer Synthesis Outcomes

**Covestro Deutschland AG**

November 2023 – April 2024 | Leverkusen, Germany

- Built and compared Random Forest, XGBoost, and LSTM models to predict prepolymer synthesis outcomes (e.g. viscosity, reaction progression) from time-series process data, evaluating tree-based vs. deep learning approaches for this tabular/temporal hybrid problem.
- Engineered lag features and rolling statistical windows from raw sensor time-series (temperature, reaction time, process variables) to feed the tree-based models, while feeding raw sequences directly into the LSTM.
- Benchmarked model performance against traditional empirical curve-fitting methods, improving early identification of batches likely to deviate from target specification.
- Deployed an interactive Streamlit dashboard exposing model predictions to chemists in real time, letting them simulate parameter changes and see predicted outcomes before running physical batches.
- **Tech stack: Python, Scikit-Learn, XGBoost, TensorFlow/Keras, Pandas, NumPy, SciPy, Matplotlib, Streamlit**

---

### Machine Learning Engineer - Electrical Vehicle Load Forecasting using Time Series Analysis

**Cognizant Technology Solutions**

September 2021 – March 2022 | Hyderabad, India

- Developed ARIMA, SARIMA, XG-Boost regressor, FB Prophet, LSTM models for time series analysis for EVs.
- Developed LSTM, achieved 96% test accuracy and strong performance on unseen data.
- **Tech stack: Python, Scikit-Learn, TensorFlow**

## PROJECTS

**Project: Invoice Capture Agent | Python | FastAPI | Structured Outputs | Postgres**

- Agent that reads supplier invoices (PDF/OCR), extracts fields with structured outputs, proposes GL coding and matches them to purchase orders via tool calling on a mock ERP REST API (Dynamics-style); low-confidence lines go to a human review screen, with an eval set of labelled synthetic invoices (accuracy, cost, latency) run in GitHub Actions.

## TECHNICAL SKILLSET

- **Programming & Practices:** Python, SQL, Git, GitLab CI/CD, Agile
- **Agents & LLM:** Agentic Workflow (LangGraph), LangChain, LiteLLM, RAG, MCP, RAGAS, QLoRA fine-tuning, Hugging Face
- **Programming Tools/Frameworks:** FastAPI, Postman, Docker, Scikit-Learn, PyTorch, TensorFlow, React(beginner)
- **Databases:** Postgres, Neo4j, MongoDB, Vector Databases (Qdrant, Pinecone, Azure AI Search)
- **Cloud technologies:** Azure, AWS- S3, EC2, Lambda, SQS, Load balancer, DynamoDB, VPC, CDK

## EDUCATION

**Master of Science in Artificial Intelligence** — March 2022 – April 2025
Technische Hochschule Würzburg-Schweinfurt, Würzburg, Germany

**Minor in Computer Science & Engineering** — July 2019 – July 2021
G Pulla Reddy Engineering College, Kurnool, India

**Bachelor of Technology in Mechanical Engineering** — August 2017 – July 2021
G Pulla Reddy Engineering College, Kurnool, India
