Application for AI Engineer - Analytics & End-User Insights

Dear Hiring Team,

I am writing to apply for the AI Engineer - Analytics & End-User Insights position at Intersnack IT KG. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on RAG systems that business users can trust.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector, from ingestion and chunking to indexing. I measured every result against ground truth taken from the SAP system, and that work raised precision and recall from 33

My Master's thesis at Covestro was about RAG evaluation. I automated generation and retrieval checks with RAGAS and PytrecEval against answers provided by chemists, and I benchmarked embedding models on more than one million chunks. As an AI consulting intern there I sat down with business teams to understand how they make decisions, and then built an agentic application with LangGraph, a FastAPI backend and a React front end, deployed to AWS with CDK. Explaining to non-technical colleagues what the system does and where it can fail is a part of that work I enjoy.

I have not worked with Qlik, Power BI or dbt in a job yet. SQL and Python are my daily tools, and the habits behind dbt, such as tests, documentation and traceable definitions, are ones I already use. I would pick up the BI side quickly.

Intersnack caught my attention because the role asks for AI-based reporting that complements existing reports instead of replacing them, with traceable metrics and attention to the EU AI Act and GDPR. I would like to help build that for procurement, manufacturing and sales teams.

I am based in Düsseldorf, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
