Application for Backend Service Engineer – Neuraverse

Dear Hiring Team,

I am writing to apply for the Backend Service Engineer – Neuraverse position at NEURA Robotics. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of that work has been Python backend services that have to stay reliable once users depend on them.

At Kniit I am the only developer of a knowledge-extraction backend for the German energy sector, reporting to the CTO. I built its Python microservices and a React interface on Azure, where domain experts approve changes, and I exposed the data to other tools through an MCP query service with millisecond-latency retrieval. I also design agentic workflows with LangGraph and work daily with Claude Code, which matches your interest in agentic development. For one high-volume source I replaced the LLM with deterministic code and cut a projected $200,000 budget to almost nothing.

On cloud and APIs, at Covestro I built a FastAPI backend, tested it with Postman, containerized it with Docker and deployed it on AWS with CDK and GitLab CI/CD. In my Master's thesis I used Lambda, SQS and DynamoDB to run large evaluation jobs, so queue-based, serverless designs are familiar ground.

I have not worked with payment or billing systems, Business Central or Dynamics, and I have not used Go or TypeScript in production. Python services, API design and AWS are where I work every day, and I would learn the commerce side of the platform from the first week, starting with the transaction lifecycle you describe.

NEURA is building cognitive robots, and Neuraverse is where that hardware meets customers and their transactions. Owning the services that make that part reliable is work I would like to do.

I am based in Stuttgart, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent and my German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
