Application for AI-Engineer (w/m/x)

Dear opta data team,

I am writing to apply for the AI-Engineer position at opta data. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the only developer of an LLM-based agent system at a start-up.

At Kniit I built that system with LangChain and LangGraph: agents for entity extraction, relationship analysis, consolidation and reflection that turn regulatory and technical documents from the German energy sector into a knowledge graph. I measured it against ground truth taken from SAP systems and kept improving prompts and agents until precision and recall rose from 33% and 45% to 93% and 90%. Before that, my Master's thesis at Covestro was about RAG quality: I automated the evaluation of the PrismaChat RAG system with RAGAS and PytrecEval against answers written by chemists, and benchmarked multilingual embedding models on more than a million chunks of internal data.

Building AI that helps your own developers work faster is close to how I work every day. I build with Claude Code, custom skills and agentic coding workflows, and at Kniit I built an MCP server that gives it millisecond-latency access to our knowledge graph, so the coding agent works with the same domain knowledge as the pipeline.

I also know that generative AI is not always the answer. For a second, high-volume data source at Kniit, I found that deterministic code worked better than a model, which cut a projected $200,000 LLM budget to almost nothing. As an AI consulting intern at Covestro I advised business teams on where agentic AI could help and built the result: a LangGraph application with a FastAPI backend and React frontend, containerized with Docker and deployed to AWS through GitLab CI/CD. At Kniit I also deploy on Kubernetes and Azure.

opta data serves more than 60,000 customers in care, therapy, medical supply and rescue services, with many products from od | care and thevea to the CareMan suite and your billing services. Billing and approval workflows are document-heavy, and every one of those products has developers behind it: both are places where RAG systems, agents and better developer tooling pay off. I have not worked in healthcare yet, but I have spent the last two years making AI output reliable enough for domain experts to trust, and I would like to do that for your customers and your developers.

I live in Essen, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and I am improving it. Thank you for considering my application. I would be glad to talk about how I could contribute to your team.

Kind regards,

Chandu Prasad Bhairapu
