Application for AI Engineer

Dear Hiring Team,

I am writing to apply for the AI Engineer position at WeHunt. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly LLM systems with Python backends that run in the cloud.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector, from ingestion and chunking to prompt engineering and indexing. I iterated on the prompts and the multi-agent setup in LangGraph until precision and recall rose from 33%/45% to 93%/90% against ground truth from the customer's SAP system. I also exposed the knowledge graph through an MCP service, so models can call it as a tool, and moved one high-volume source to a code-based pipeline that removed a projected $200,000 LLM bill. I owned the work from idea to production and reported directly to the CTO.

My backend and cloud experience comes from Covestro. I built a Python/FastAPI service for an agentic workflow, containerized it with Docker and deployed it to AWS with CDK and GitLab CI/CD. In my thesis I ran AWS Lambda, SQS and DynamoDB for RAG evaluation, designed RAG pipelines and benchmarked embedding models on over a million chunks with PyTorch and Hugging Face. My earlier data science and ML work used TensorFlow, XGBoost and LSTMs.

The role asks for five years of backend Python, and I have three, so I would be growing into parts of it. Where I am thinner is OpenAI-specific production work, WebSocket streaming and MLflow, and I would pick those up quickly.

An insurance company that wants one person to run AI projects from idea to production, with room to grow, is the kind of ownership I am looking for. I can work fully remotely from Germany, I hold an EU Blue Card, and I can start on 15 November 2026.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
