Application for AI Engineer (m/w/d), Berlin

Dear Michael Page team,

I am writing to apply for the AI Engineer position with your client in Berlin. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, from classic machine learning models to LLM-based systems built around real business workflows.

At Kniit, a start-up building for the German energy sector, I am the only developer of a knowledge-extraction pipeline and report directly to the CTO. I built a multi-agent system with LangGraph that reads regulatory and technical documents and turns them into a knowledge graph. I validated it against ground truth taken from SAP systems and kept improving it until precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume data source I built a deterministic, code-based pipeline, which cut a projected $200,000 LLM budget to almost nothing while pushing accuracy toward 100%.

Machine learning and deep learning are where I started. As a data science intern at Covestro I built Random Forest, XGBoost and LSTM models in Python to predict the outcome of chemical batches from sensor time series, engineered lag and rolling-window features with Pandas and NumPy, and gave chemists a Streamlit dashboard to test parameter changes before running a batch. At Cognizant I forecast electric vehicle load with ARIMA, Prophet, XGBoost and an LSTM in TensorFlow that reached 96% test accuracy. In my Master's thesis I used PyTorch and Hugging Face models to benchmark multilingual embeddings on more than a million chunks of internal data.

Most of my work has been getting AI to run inside systems people already use. At Kniit I connected the knowledge graph to existing tools through an MCP query service and a React and Python web app on Azure, where domain experts validate and approve changes to the graph. At Covestro I worked with business teams to find where agentic AI could help, then built the application with FastAPI and React, containerized it with Docker and deployed it to AWS through GitLab CI/CD.

Your client builds software that brings AI into existing business processes for customers across industries. That is close to what I did at Kniit and Covestro: owning a system end to end, from model to deployment, and working directly with the people who use it.

I will be based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application. I would be glad to hear more about the role and the team.

Kind regards,

Chandu Prasad Bhairapu
