Application for KI-Plattform-Experte with a focus on Data Science and LLM Engineering

Dear Mr Witte,

I am writing to apply for the KI-Plattform-Experte position at Sparda-Bank Hannover. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, from forecasting models to generative AI systems, which is the combination your role asks for.

Forecasting and time series are where I started. At Cognizant I forecast electric vehicle load with ARIMA, SARIMA, Prophet, an XGBoost regressor and an LSTM that reached 96% test accuracy and held up well on unseen data. As a data science intern at Covestro I built Random Forest, XGBoost and LSTM models that predict the outcome of chemical batches from sensor time series, and gave the chemists a Streamlit dashboard to test parameter changes before running a batch.

My recent work is LLM engineering. At Kniit, a start-up building for the German energy sector, I am the only developer of a knowledge-extraction system and report directly to the CTO: multi-agent LangGraph pipelines that turn regulatory documents into a knowledge graph, validated against ground truth from SAP systems, with precision and recall raised from 33% and 45% to 93% and 90%. I built an MCP query service on top of the graph and a web app on Azure where domain experts approve changes. My Master's thesis at Covestro was on RAG: I benchmarked multilingual embedding models for semantic search on more than a million chunks and automated the evaluation of answers with RAGAS and PytrecEval.

For a second, high-volume data source at Kniit I built a deterministic, code-based extraction pipeline that cut a projected $200,000 LLM budget to near-zero recurring cost. As an AI consulting intern at Covestro I worked with business teams to find where agentic AI could help, then built the application and deployed it to AWS with Docker and CDK, with code versioning and CI/CD in GitLab. I have not worked with Databricks yet, but I have built pieces such a platform needs: code versioning and CI/CD in GitLab, Docker deployments, evaluation against ground truth, and a step where domain experts approve changes.

Your plan to build AI in-house where no standard product fits, with clear standards and governance and close work with the business units, is the kind of work I want to do next. I have not worked in banking yet, and a cooperative bank that has looked after its members since 1903 is where I would like to learn it.

I will be based in Hannover, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and I am improving it. Thank you for considering my application. I would be glad to discuss how I could help build your AI platform.

Kind regards,

Chandu Prasad Bhairapu
