Application for Forward Deployed Engineer, KI-native Entwicklung

Dear Ms Beck,

I am writing to apply for the Forward Deployed Engineer position at Union Investment. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agentic systems built together with the domain experts who use them.

At Kniit, a start-up building for the German energy sector, I am the only developer of an agentic knowledge-extraction system and report directly to the CTO. I built it with LangGraph as parallel agents for entity extraction, relationship analysis, consolidation and reflection, and built the indexing with agentic, deterministic and monolithic strategies. Evaluation drove the work: I measured the system against ground truth taken from SAP systems and kept changing prompts and agents until precision and recall went from 33% and 45% to 93% and 90%.

I build the integration around the model too. I wrote an MCP query service that gives Claude Code millisecond-latency access to our knowledge graph, and a React and Python web app on Azure where SAP experts validate and approve changes. Claude Code with custom skills and agentic coding workflows is a standard part of how I develop. For a second, high-volume data source I built a deterministic, code-based pipeline that cut a projected $200,000 LLM budget to almost nothing.

Working at the boundary between business and technology is how I started. As an AI consulting intern at Covestro I worked with business stakeholders to understand their decision-making workflows, advised them where agentic AI could help, and then built it: a LangGraph application that routes requests to vector search, inference or summarization, with a FastAPI backend and React frontend, containerized with Docker and deployed to AWS through GitLab CI/CD.

Union Investment already lets AI propose fund allocations for clients, next to human advisers. A team that builds agents, reusable skills and guardrails together with reliability and quality engineers is where I would like to work next: close to the business, with evaluation and quality treated as part of delivery. I have not worked in finance yet; the closest I have come is regulatory documents in the German energy sector, where the extraction had to be checked against ground truth before anyone relied on it.

I will be based in Berlin, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and I am improving it. Thank you for considering my application. I would be glad to talk about it in person.

Kind regards,

Chandu Prasad Bhairapu
