Application for Analytics Engineer (f/m/d)

Dear Hiring Team,

I am writing to apply for the Analytics Engineer position at KoRo. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on making data reliable enough for AI systems to use.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector. I modelled the business entities and their relationships in a Neo4j knowledge graph, and I checked every result against ground truth taken from the SAP system. That work raised precision and recall from 33

Evaluating AI answers is something I did before that as well. In my Master's thesis at Covestro I automated the evaluation of a RAG system with RAGAS and PytrecEval against ground truth from chemists. As a Data Scientist intern there I engineered features from sensor time series in Python and Pandas and built a Streamlit dashboard so chemists could answer "what if" questions themselves. During my AI consulting internship I learned to sit with business teams and turn their questions into something a system can answer.

I have not used dbt, BigQuery or Tableau in a job yet. My daily tools are Python and SQL, and the testing, documentation and metric-definition habits behind dbt are ones I already work with. I would pick up the rest quickly.

KoRo caught my attention because the role sits between data and the business and explicitly includes AI-ready metadata and a shared data dictionary. I like the idea of a team that wants people to answer their own questions with reliable data.

I am based in Berlin, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
