Application for Management Data Analyst

Dear Hiring Team,

I am writing to apply for the Management Data Analyst position at UNDP. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a steady thread of data analysis, modelling and reporting for business users.

At Covestro I worked as a Data Scientist (Intern) on predicting the outcome of prepolymer synthesis from sensor time-series. I cleaned and engineered the data, compared Random Forest, XGBoost and LSTM models against the existing curve-fitting approach, and built a Streamlit dashboard so chemists could try parameter changes before running a physical batch. In my AI Consulting internship at Covestro I sat down with business stakeholders, learned how they make decisions, and turned their requirements into an agentic application with a React front end and a Python backend.

At Kniit I was the sole developer of a knowledge-extraction pipeline for the German energy sector, working with SAP domain experts and reporting to the CTO. I checked the results against ground truth taken from the SAP system and raised precision and recall from 33

Your role also covers dashboards, databases and tools for the Management Consulting Team. My daily tools are Python, SQL, Pandas and Streamlit. I have not used Power BI, R or DAX in a job so far, and I would learn them quickly given my machine learning and data science background. I am drawn to the role because it supports country offices worldwide in improving how they work, and the mix of analysis and advisory work is what I enjoyed most at Covestro.

I am based in Bonn, hold an EU Blue Card, and can start on 15 November 2026. I am fully willing to travel for engagements. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
