Application for KI-Engineer (m/w/d)

Dear Heinrich Schmid team,

I am writing to apply for the KI-Engineer position at Heinrich Schmid in Reutlingen. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of that work has been about taking AI systems from a first version to an application people actually use.

At Kniit, a start-up working for the German energy sector, I have been the only developer of a knowledge-extraction system, reporting directly to the CTO. I prepared the data (ingestion and chunking of regulatory and technical documents), built the agents in LangGraph and measured them against a ground truth derived from SAP system data: precision and recall went from 33% and 45% to 93% and 90%. Not every step needed an LLM. For a second, high-volume data stream I built a deterministic pipeline that cut a projected $200,000 LLM budget to almost nothing. To connect the result to other tools, I wrote an MCP service that answers queries against the knowledge graph in milliseconds, and a web app on Azure where domain experts approve changes.

RAG pipelines were the subject of my master's thesis at Covestro. I designed chunking, indexing and vector database setups, fine-tuned models for retrieval, compared multilingual embedding models on more than a million chunks of internal data and automated the evaluation with RAGAS and PytrecEval. I have also fine-tuned open-source LLMs with QLoRA, for example an Open Llama 3B model. As an AI consulting intern at Covestro I then worked with business teams on their decision workflows and built an agentic application with a FastAPI backend, packaged with Docker and deployed to AWS with CDK.

I have not used n8n or Make at work yet. The logic behind them, connecting triggers, APIs and AI steps with a person approving uncertain cases, is what I already build in Python, so I expect to pick them up quickly.

Heinrich Schmid is a family-run group with more than 7,000 people across 200 sites. From your other postings I understand that project and site management is where a lot of the everyday work happens, and that is where good automation saves real time. I would like to build those AI solutions close to the people who use them, including the older applications that have to keep running.

I will be based in Reutlingen, hold an EU Blue Card and can start on 15 November 2026. My salary expectation is EUR 70,000 gross per year. My German is B1 and I am improving it; my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
