Application for Founding AI Engineer – LLMs & AI Agents

Dear OLM Consultants team,

I am writing to apply for the Founding AI Engineer – LLMs & AI Agents position you are recruiting for. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of the core product at an early-stage start-up.

At Kniit, a small start-up working for the German energy sector, I am the only developer of its knowledge-extraction system and report directly to the CTO. I own the whole pipeline: how documents are ingested and chunked, how they are indexed, which agents run. I built LangGraph agents for extraction, relationship analysis, consolidation and reflection that run in parallel, and measured them against a ground truth derived from SAP system data until precision and recall moved from 33% and 45% to 93% and 90%. For a second, high-volume data stream I built a deterministic pipeline instead of an LLM, which cut a projected $200,000 LLM budget to almost nothing.

The work also went past the model. I wrote an MCP service that serves the knowledge graph with millisecond latency, and Expert Interface, a React and Python web app on Azure where domain experts approve knowledge-graph changes. My strength is on the Python and FastAPI backend side; on the frontend I have shipped React interfaces in both roles. At Covestro I worked out the requirements with business stakeholders and then designed and deployed an agentic LangGraph application, with a FastAPI backend and React frontend, packaged with Docker, deployed to AWS with CDK and versioned in GitLab with CI/CD. My master's thesis there was on retrieval itself: I compared multilingual embedding models on more than a million chunks and automated RAG evaluation with RAGAS and PytrecEval.

A platform that finds passive candidates, talks to them and matches them to roles needs agents that cope with messy text and retrieval that is measured rather than assumed. Matching people to opportunities is a retrieval and ranking problem with people on both sides, and I would like to own it end-to-end with the founding team.

I already live in Germany and will be based in Berlin, on-site. I hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
