Application for Platform Engineer (m/f/d), Data & AI

Dear Redcare Pharmacy team,

I am writing to apply for the Platform Engineer position at Redcare Pharmacy in the Data & AI department. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, so I know the workloads your AI platform has to run from the side of the team that builds them.

Redcare, Europe's leading e-pharmacy, is building its next-generation AI platform inside the Data & AI department on Azure, AKS and Databricks, so that data and AI teams can deploy and run their workloads without fighting the infrastructure. Having been on the AI-team side of that problem, the self-service part of this role interests me most.

At Kniit, a start-up working for the German energy sector, I am the only developer of an AI knowledge-extraction system and report directly to the CTO. I built the pipeline from ingestion to indexing, plus the parts around it: Python microservices, an MCP query service and Expert Interface, a React web app deployed on Azure where domain experts approve changes. The stack runs on Docker and Kubernetes. The system itself is a multi-agent LangGraph pipeline whose precision and recall I raised from 33% and 45% to 93% and 90%.

Infrastructure as Code and pipelines are where I started at Covestro. For my master's thesis I defined the AWS infrastructure for a RAG evaluation pipeline (Lambda, SQS, DynamoDB) in CDK. As an AI consulting intern I then containerized an agentic application with Docker, deployed it to AWS with CDK and kept it in GitLab with CI/CD pipelines.

I want to be honest about the gaps. I have not used Terraform or Azure Databricks in a job, and my Kubernetes exposure comes from the Kniit stack, not from operating a shared platform. Your posting describes a role where I can learn those from more experienced engineers while I contribute on containers, pipelines and the needs of the AI teams who use the platform. That is the step I am looking for.

I will be based in Cologne, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
