Application for Applied AI Engineer

Dear Revolut hiring team,

I am writing to apply for the Applied AI Engineer position at Revolut. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I have owned an AI product from the first design through deployment and iteration.

At Kniit, a start-up working for the German energy sector, I am the only developer of an LLM-based knowledge-extraction system and report directly to the CTO. I measured it with precision and recall against a ground truth derived from SAP system data, and used that measure to steer the multi-agent LangGraph system from 33% and 45% to 93% and 90%. For a second, high-volume data stream I built a deterministic pipeline instead of an LLM, which cut a projected $200,000 LLM budget to almost nothing while pushing accuracy toward 100%.

My background is in data science and machine learning as well as LLMs. At Covestro I built Random Forest, XGBoost and LSTM models on process time-series data, benchmarked them against empirical curve-fitting, which improved early identification of batches likely to go off-spec, and gave the chemists a Streamlit dashboard to try parameter changes before running a batch. Earlier, at Cognizant, I built ARIMA, SARIMA, Prophet and LSTM models to forecast electric-vehicle load. My master's thesis evaluated RAG systems with RAGAS and PytrecEval and compared multilingual embedding models on more than a million chunks of data.

The cross-functional side is familiar too. As an AI consulting intern at Covestro I worked with business teams to understand how they made decisions, advised them where an agent could help, and then built it, containerized it with Docker and deployed it to AWS with CDK, with version control and CI/CD in GitLab. At Kniit my main partners are SAP domain experts rather than engineers.

AIR, the in-app assistant Revolut launched in April, is the kind of product I want to work on: it freezes cards, explains spending and manages subscriptions inside the app, under a zero-data-retention rule for its AI partners. Measuring whether an assistant like that gets things right is the problem I have spent the last two years on.

I will be based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
