Application for Forward Deployed AI Engineer

Dear Sportradar team,

I am writing to apply for the Forward Deployed AI Engineer position at Sportradar. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part I enjoy most is sitting with the people who do the work, finding out what slows them down, and then shipping something that fixes it.

That is close to how I worked at Covestro as an AI consulting intern. I talked with business teams about how they made decisions, advised them on where an agent could support their work, and then built the application myself: a LangGraph agent that routes requests between vector search, general inference and summarization, with a FastAPI backend and React frontend, packaged with Docker, deployed to AWS with CDK, and versioned in GitLab with CI/CD.

At Kniit I am the only developer on a knowledge-extraction system for the German energy sector and report directly to the CTO, so I plan my own work and keep him updated. I have built parallel LangGraph agents for regulatory and technical documents and an MCP service that gives other agents fast access to the resulting knowledge graph. I measured each change against a test set. Against a ground truth derived from SAP system data, precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume data stream I built a deterministic pipeline instead of an LLM, which cut a projected $200,000 LLM budget to almost nothing.

Testing AI properly is also where I started. My master's thesis at Covestro automated RAG evaluation with RAGAS and PytrecEval against answers written by chemists, on an AWS pipeline with Lambda, SQS and DynamoDB, and compared multilingual embedding models on more than a million chunks of internal data.

Sportradar already uses generative AI to turn live sports data into match reports and previews, so LLM work is already part of the product here. A forward deployed role that brings the same tools to internal departments, with senior engineers to learn from, is the job I want next.

I will be based in Leipzig, fully on-site, hold an EU Blue Card and can start on 15 November 2026. Travel between offices is no problem. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
