Application for AI Engineer (Mid-Level)

Dear Hiring Team,

I am writing to apply for the AI Engineer (Mid-Level) position you are recruiting for in the Munich/Augsburg area. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the past year my daily work has been what your posting describes: agents on top of LLMs that take several reasoning steps before they answer.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector, reporting to the CTO. It runs four LangGraph agents in parallel, for entity extraction, relationship analysis, consolidation and a reflection agent. Measured against a ground truth built from SAP data, precision and recall went from 33% and 45% to 93% and 90%. The pipeline covered ingestion, chunking, prompt engineering and indexing, all of which I owned, working with SAP domain experts.

I also learned where an LLM does not belong. For a second, high-volume source I replaced the model calls with deterministic code, which cut a projected $200,000 LLM budget to almost nothing. To make the resulting knowledge graph usable by other agents, I built a Model Context Protocol service that answers in milliseconds and plugs straight into Claude Code.

RAG and vector databases were the subject of my Master's thesis at Covestro. I designed retrieval pipelines, benchmarked multilingual embedding models on more than a million chunks of internal chemical data and automated the evaluation with RAGAS and PytrecEval against answers written by chemists. Before that, as an AI consulting intern, I built a LangGraph agent that routes requests between vector search, general inference and summarization, with a FastAPI back end and a React front end, deployed with Docker on AWS via CDK. On open-source models, I fine-tuned Open Llama 3B with QLoRA in a personal project.

I work best close to the product and the people using it, so an on-site team building with Claude and other frontier models suits me well. I would be glad to hear more about the client and the products the team is working on.

I will be based in the Munich/Augsburg area, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
