Application for AI Operations Engineer (m/f/d)

Dear ARX Robotics team,

I am writing to apply for the AI Operations Engineer position at ARX Robotics. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, so I know what it takes to keep an AI system running once other people depend on it.

At Kniit, a start-up working for the German energy sector, I am the only developer of an AI knowledge-extraction system and report directly to the CTO. The Python services run in a Docker and Kubernetes stack on Azure. I evaluated the multi-agent LangGraph pipeline against a ground truth built from SAP data and raised precision and recall from 33% and 45% to 93% and 90%. I also built an MCP service and Expert Interface, a web app where domain experts review and approve changes, which gives the people who own the data a say in what goes live.

Pipelines and infrastructure as code are where I started at Covestro. As an AI consulting intern I containerized an agentic application (Python, FastAPI, React), deployed it to AWS with CDK and kept it in GitLab with CI/CD pipelines. My master's thesis was about measuring quality: I automated generation and retrieval evaluation of a RAG system with RAGAS and PytrecEval and defined its AWS infrastructure as code. Earlier I trained and compared prediction models on sensor time-series data and gave chemists a dashboard to check them.

I want to be clear about the gaps. I have not worked in a defense or export-controlled environment, and I have not used MLflow or Terraform in a job. My CI/CD experience is GitLab, and I have used Kubernetes as part of an application stack rather than running a shared platform. Versioning, validation, monitoring and documented releases are habits I already have, and the tools are what I would learn first.

ARX builds autonomy software and ground robots for European armed forces and is scaling production, which means the models behind them need dependable release and monitoring processes. Making that part boring and auditable is the work I want to do next.

I am based in Munich, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
