Siemens Advanta
AI & New Technologies practice

Essen, 21 October 2026

Application: Consultant, AI & New Technologies

Dear AI & New Technologies Team,

I am writing to apply for the Consultant position in the AI & New Technologies practice at Siemens Advanta. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of that work sits where GenAI meets industrial and business data, which is the skill spike your practice asks for.

At Kniit GmbH, a start-up serving the German energy sector, I am the only developer on a document intelligence system. I work with SAP domain experts to understand what they need from regulatory and technical documents, and I report directly to the CTO. From there I designed LangGraph agents that run in parallel and checked their output against ground truth from SAP systems, raising precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume source, a deterministic pipeline brought a projected $200,000 LLM budget down to almost no running cost. I also built Expert Interface, a web app on Azure where the experts approve changes themselves.

My industrial experience comes from Covestro, where I did two internships and my master's thesis. My second internship was consulting work: I worked with business stakeholders to understand their decision-making workflows, advised on how agentic AI could support them, and then built and deployed the solution on AWS. As a data science intern I predicted prepolymer synthesis outcomes from sensor time series and built a dashboard where chemists could test parameter changes before running a batch. In my thesis I automated the evaluation of a RAG system over internal chemical data against answers written by chemists. Before my master's I worked at Cognizant, a global IT services and consulting company, on EV load forecasting with LSTM and statistical time-series models.

My hands-on agent work so far is in LangGraph; Snowflake, dbt, Microsoft Foundry and the agent SDKs you name are newer to me. The ideas behind them (tools, agent handoffs, state, evaluation) are the same ones I work with in LangGraph, so I expect to be productive with them quickly. OT systems would be new to me.

What draws me to AI&NT is that your consultants write production code inside real OT and IT environments rather than stopping at a strategy deck. With Siemens showing nine industrial copilots at CES 2026 and expanding its NVIDIA partnership towards an Industrial AI Operating System, there is a lot of room for agentic proofs of concept that turn into real plant solutions, and I would like to help build them.

I live in Essen, hold an EU Blue Card and can start from 15 November 2026. I am happy to relocate and to travel to clients. I work fully in English (business fluent) and speak German at B1.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
