Application: Forward Deployed Engineer

Dear Jiehua and Almo,

I am writing to apply for the Forward Deployed Engineer position at Comena. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and in my last two roles I have been the person who builds the AI system and then works with the people who have to use it.

At Kniit GmbH, an early-stage start-up, I am the only developer on an LLM agent system for the German energy sector. The agents pull structured knowledge out of messy regulatory and technical documents, and I tested them against ground truth from SAP systems together with SAP domain experts, raising precision and recall from 33% and 45% to 93% and 90%. Experts review and approve the agents' changes in Expert Interface, a React and Python web app I built on Azure. Turning unstructured input into records a business system can trust is close to what your agents do with purchase orders.

I like working with non-technical people. My second internship at Covestro was an AI consulting role: I sat with business stakeholders, worked out how agentic AI could help their decision-making workflows, and then built and deployed it, with a FastAPI backend, a React frontend and a LangGraph agent, deployed to AWS with Docker, CDK and GitLab CI/CD.

Python is my main language, and Postgres is part of the stack I work with at Kniit. TypeScript and Django are new to me, and I have worked with SAP data but not yet integrated an ERP through its API. Those are the first things I would learn, and I am used to learning fast as the only engineer on a project.

What caught my attention is how ordinary the problem is: distributors of fasteners, parts and MRO supplies still type orders from emails, PDFs and Excel files into the ERP by hand. I spent a year and a half at Covestro in the chemical industry, so industrial companies and their systems are familiar ground for me. I would like to be one of the engineers who sets up each new customer and makes the agents work with their catalog and their ERP, and I am happy to put in the hours a small team needs.

I will be based in Munich, hold an EU Blue Card and can start from 15 November 2026. My German is at B1 level, which helps with German customers.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
