Application: Software Engineer (Autonomous Agents)

Dear Autonomous Agents Team,

I am writing to apply for the Software Engineer (Autonomous Agents) position at Kraken. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the past year I have built AI agents for the German energy sector, so a team putting agents in front of energy customers feels like the natural next step.

At Kniit GmbH I am the only developer on an LLM-based agent system that reads regulatory and technical documents for the energy sector. I worked out with SAP domain experts what the agents needed to extract, reported to the CTO, and built the whole thing in Python. I also built an MCP server that exposes our knowledge graph as a tool with millisecond retrieval, integrated into Claude Code, which is close to what your team does with MCP interfaces into Kraken.

The part of agent work I care about most is trust. Agent output changes from run to run, so I test it against ground truth: at Kniit I raised precision and recall from 33% and 45% to 93% and 90% against data from SAP systems, and in my master's thesis at Covestro I built evals for a RAG assistant with RAGAS and PytrecEval. Agents at Kniit don't change the knowledge graph on their own. Domain experts approve their changes in Expert Interface, a web app I built on Azure. For a second, high-volume data source, a deterministic pipeline was used instead of an LLM approach and brought a projected $200,000 LLM budget down to almost nothing, which taught me that not every step needs a model.

I am comfortable with people outside engineering. My second internship at Covestro was an AI consulting role: I worked with business stakeholders on their decision-making workflows, advised on an agentic approach and then built and deployed it on AWS with Docker, CDK and GitLab CI/CD. Most of my code is Python. TypeScript and customer-facing conversational agents are where I have the most to learn, so those are the two things I would work on first.

Kraken is contracted to serve more than 70 million energy accounts for suppliers such as EDF and E.ON Next, and Magic Ink suggests actions like requesting a meter reading. Turning those suggestions into agents that safely finish the job, and doing it once in a way that works for every client, is a problem I would like to work on.

I will be based in Berlin, hold an EU Blue Card (no sponsorship needed) and can start from 16 November 2026. My German is at B1 level.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
