## Application for Graduate AI/ML and Data Engineer (m/f/d)

Dear Hiring Team,

I am writing to apply for the Graduate AI/ML and Data Engineer position at Ericsson in Aachen. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I want to go deeper into the data engineering side of machine learning in a large production environment, which your AI development team in Aachen works on for 5G networks.

Most of my work has been data pipelines that feed models. At Kniit I am the only developer of a knowledge-extraction pipeline for the German energy sector, from ingestion and chunking to indexing, and I report to the CTO. I validated its output against a ground truth derived from SAP data, and precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume source I built a deterministic pipeline instead of an LLM one, which cut a projected $200,000 LLM budget to almost nothing. The data sits in Postgres, MongoDB and Neo4j.

On classic machine learning, I built Random Forest, XGBoost and LSTM models at Covestro to predict outcomes of a chemical synthesis from sensor time series, with lag features and rolling statistical windows that I engineered from the raw signals, and a Streamlit dashboard for the chemists. At Cognizant I forecast electric-vehicle load with ARIMA, SARIMA, Prophet, XGBoost and an LSTM in TensorFlow. My Master's thesis benchmarked multilingual embedding models with PyTorch and Hugging Face on more than a million text chunks.

I have deployed LLM applications with Docker on AWS via CDK and on Azure, with Git and GitLab CI/CD. To be clear about the gaps: my programming is in Python and I have not used Java or C++ professionally, and I have not yet worked with Kafka, gRPC or PySpark. I learn new tools quickly and would welcome the mentoring your programme describes.

Working on AI for 5G networks would give me data at a scale and speed I have not had before, and I would like to learn how Ericsson moves models from experiments into systems that run in real networks.

I will be based in Aachen, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

**Chandu Prasad Bhairapu**
