Application for Software Engineer

Dear Hiring Team,

I am writing to apply for the Software Engineer position advertised through Hyra, focused on AI features and platform functions. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and most of the tasks in your posting describe the work I have done at Kniit since November 2025.

At Kniit I own a knowledge-extraction pipeline for the German energy sector on my own, reporting to the CTO: ingestion, chunking, prompt design and indexing. The extraction runs as a multi-step LangGraph workflow, with four agents for entities, relationships, consolidation and reflection. I measured the results against a ground truth derived from the SAP system and improved precision and recall from 33% and 45% to 93% and 90%.

The output is a knowledge graph in Neo4j, and I made it usable as structured context for other tools. I built a Model Context Protocol service that serves the graph with millisecond latency and connects directly to Claude Code, so coding agents can query it while they work. On cost, I treated the LLM as one option among several: for a second, high-volume source I replaced the model with deterministic code and cut a projected $200,000 LLM budget to almost nothing.

Retrieval architecture was also the topic of my Master's thesis at Covestro. I designed RAG pipelines, benchmarked multilingual embedding models on more than a million chunks of internal data and automated retrieval and answer evaluation with RAGAS and PytrecEval. As an AI consulting intern there I shipped a LangGraph application with a FastAPI back end, deployed with Docker on AWS via CDK, with CI/CD in GitLab, after working out with business teams what they actually needed.

I would bring this to your platform and product teams in a financial-services setting where reliability and cost matter as much as model quality.

I will be based in Berlin, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
