Application for AI-Native Software Engineer (m/w/d)

Dear Senacor Team,

I am writing to apply for the AI-Native Software Engineer position at Senacor in Hamburg. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and for the past year coding agents have been part of how I build software, not an experiment on the side. Your plan to replace the next monolith with core systems and automation layers, built AI-native from day one, is what drew me to this role.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector and report to the CTO. I build it with Claude Code, my own skills and agentic coding workflows, and I keep the code to clean code principles. I also built a Model Context Protocol service that exposes our knowledge graph with millisecond latency and plugs into Claude Code, so the coding agent can use our own data as a tool while it works.

The system itself is a set of Python services and APIs. Expert Interface, where domain experts validate and approve changes to the knowledge graph, is a React front end on Python microservices deployed on Azure. The extraction runs as an orchestration of LangGraph agents for entities, relationships, consolidation and reflection, measured against a ground truth derived from the SAP system: precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume source I built a deterministic pipeline instead of an LLM one, which cut a projected $200,000 LLM budget to almost nothing.

Before that, as an AI consulting intern at Covestro, I turned business requirements into a LangGraph application with a FastAPI back end and a React front end, tested the APIs with Postman, and deployed it with Docker on AWS via CDK, with version control and CI/CD in GitLab. My backend work so far is in Python; I have not used TypeScript, Java or Go in a job and would pick up whichever your platform uses.

A greenfield process platform where the engineering standards for AI-written code are still being set is the kind of place where I would like to contribute: making sure what the agents produce stays traceable, tested and maintainable.

I will be based in Hamburg, hold an EU Blue Card, am happy to travel to clients and can start on 15 November 2026. My German is at B1 level and my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
