Application for Generative AI Engineer

Dear Hiring Team,

I am writing to apply for the Generative AI Engineer position on the team behind the Sparkassen-KIPilot. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, mostly NLP and generative AI systems with a Python back end, which is the mix of work your posting describes.

At Kniit I am the only developer of a knowledge-extraction system for the German energy sector and report to the CTO. It reads complex regulatory and technical documents with four LangGraph agents running in parallel, for entities, relationships, consolidation and reflection. Measured against a ground truth derived from SAP data, precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume source I chose deterministic code over the LLM and cut a projected $200,000 LLM budget to almost nothing.

I also built the back end. Expert Interface is a set of Python microservices with a React front end, deployed on Azure, where domain experts approve changes to the knowledge graph. At Covestro I built a LangGraph application with a FastAPI back end, containerized it with Docker and deployed it to AWS with CDK, with version control and CI/CD in GitLab.

On the NLP and machine learning side, my Master's thesis at Covestro was about RAG: I designed retrieval pipelines, benchmarked multilingual embedding models on more than a million chunks of internal data and automated the evaluation with RAGAS and PytrecEval. Earlier I trained XGBoost and LSTM models on process time series, and I have fine-tuned Open Llama 3B with QLoRA in a personal project.

An assistant that helps bank employees analyse documents and write customer letters, running on the group's own infrastructure, is a product where careful evaluation and solid operations matter as much as the model. That is the kind of work I did at Kniit and Covestro, and I would like to do it for both the product and your customer projects.

I hold an EU Blue Card, can work remotely within Germany or on campus, and can start on 15 November 2026. My German is at B1 level and my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
