Application for Machine Learning Engineer

Dear Hiring Team,

I am writing to apply for the Machine Learning Engineer position at HiredBuddy. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, much of it on classic machine learning with Python, Scikit-Learn, Pandas and NumPy.

At Covestro I worked as a Data Scientist (Intern) on predicting prepolymer synthesis outcomes from sensor time-series. I compared Random Forest, XGBoost and an LSTM, built lag features and rolling windows from the raw process data, and benchmarked the models against the empirical curve-fitting the chemists used before. A Streamlit dashboard let them change parameters and see the prediction before running a physical batch. Earlier, at Cognizant, I developed ARIMA, SARIMA, XGBoost, Prophet and LSTM models for EV load forecasting; the LSTM reached 96% test accuracy.

My most recent work is at Kniit, where I am the sole developer of a knowledge-extraction system for the German energy sector. Evaluation was central there: I measured a multi-agent LangGraph pipeline against a ground truth derived from SAP data and raised precision and recall from 33% and 45% to 93% and 90%. For a high-volume data stream I replaced the LLM step with a code-based pipeline, which cut a projected $200,000 LLM budget to near zero. I did this work in Python with Git, Docker and Azure, and I have used PyTorch and TensorFlow for deep learning as well.

I would like to work at HiredBuddy because the role covers the full loop, from cleaning and preparing data to training, evaluating and integrating models, and because it leaves room to move into deep learning, NLP and deployment. I can also work well on my own in a remote team: at Kniit I reported directly to the CTO and worked daily with SAP domain experts.

I am based in Germany, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
