Application for AWS AI Engineer

Dear Hiring Team,

I am writing to apply for the AWS AI Engineer position at Slalom. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it on AWS and with business stakeholders close to the problem.

On AWS I have worked with the services you name. For my Master's thesis at Covestro I built the infrastructure for a RAG evaluation setup with Lambda, SQS and DynamoDB, defined with CDK. During my consulting internship there I containerized an agentic application with Docker and deployed it to AWS with CDK, with GitLab CI/CD in front of it. I have not used Amazon Connect or Bedrock in a client project yet, but the building blocks are familiar: serverless functions, DynamoDB as the data layer, and LLM-based agents that call tools.

The conversational side is where most of my recent work sits. At Kniit I was the sole developer of a multi-agent LangGraph system that extracts knowledge from regulatory documents, and I brought precision and recall from 33

Your role also needs someone who can talk to the people who will use the system. At Covestro I sat down with business stakeholders to understand how they made decisions, advised them on where agentic AI could help, and turned that into the solution we built. Slalom's approach of equipping clients to run their cloud journey themselves, "wir kommen, um zu gehen", matches how I like to hand over work. At Kniit I delivered the pipeline end-to-end and handed it over to the team.

I am based in Düsseldorf, hold an EU Blue Card and can start on 15 November 2026. I am happy to travel to client sites. My German is B1 at the moment, and my English is business fluent. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
