Application for Data & AI Engineer

Dear Product & Tech Team,

I am writing to apply for the Data & AI Engineer position at JUNI. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently on pipelines where LLMs and embeddings do the extraction and retrieval and an evaluation decides whether the output is good enough.

At Kniit I was the only developer on a knowledge-extraction pipeline for the German energy sector, reporting to the CTO. I owned it from ingestion and chunking to indexing, and I built multi-agent structured extraction with LangGraph over regulatory documents. I measured every iteration against a ground truth derived from SAP system data, and took precision and recall from 33%/45% to 93%/90%. For a second, high-volume source I wrote a deterministic, code-based extractor instead, which cut a projected $200,000 LLM budget to near-zero recurring cost and brought accuracy close to 100%. Your question of what error rate is acceptable per use case, and what happens when a result is wrong, is the one I worked through on both sources.

Embeddings and evaluation were also the core of my Master's thesis at Covestro. I benchmarked multilingual embedding models on more than one million chunks of internal chemical data and automated retrieval and answer evaluation with RAGAS and PytrecEval against answers written by chemists. As a data science intern there, I did the classic side too: pandas feature engineering on sensor time series and model comparisons that the chemists used through a Streamlit tool.

I work with Claude Code as my main coding tool. At Kniit I built an MCP service that exposed our knowledge graph to it, alongside custom skills and agentic coding workflows. I also built Expert Interface, a small web app where domain experts approve changes to the graph before they are written. That review step before data goes live is close to what you describe for JUNI Core, where users need to trust and trace each result.

What draws me to JUNI is the mix of data you want to connect: your own tools, science partners, publications, patents, investors and talent, for a Startup Factory that helps research become companies in Berlin and Brandenburg. Owning that data layer in a small team, close to the Head of Product & Tech, is the same set-up I worked in at Kniit.

I will be based in Berlin, hold an EU Blue Card and can start from 15 November 2026. My German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
