ABOUT ME

Master's graduate in Artificial Intelligence with 3 years of professional experience in AI engineering and software development. Specialized in data science and data analysis in Python and SQL, from predictive models and time-series forecasting to neural networks and the visualisation of results. Most recently sole developer of an agentic knowledge-extraction system for the German energy sector, backed by experience with Azure, large data volumes and measuring models against ground truth.

EXPERIENCE

Associate Generative AI Developer - Agentic Indexing Pipeline Engineer for German Energy Sector

Kniit GmbH

November 2025 – present Muldestausee, Germany

- Designed and optimized a complex agentic system for knowledge extraction (LangGraph: entity-extraction, relationship-analysis, consolidation and reflection agents running in parallel) over regulatory and technical documents, raising precision/recall from 33%/45% to 93%/90% against an SAP-system-derived ground truth.
- Developed Expert Interface, a full stack internal tool for graph curation (React front end, Python microservices back end) deployed on Azure, letting domain experts validate and approve knowledge-graph changes.
- Engineered a deterministic (code-based) extraction pipeline for a second, high-volume data source, cutting a $200,000 projected LLM budget to near-zero recurring cost while pushing extraction accuracy toward 100%.
- Sole developer owning the full knowledge-extraction pipeline end-to-end: data ingestion, chunking, prompt engineering and indexing (agentic, deterministic and monolithic strategies), reporting directly to the CTO and working with SAP domain experts.
- Designed and implemented a Model Context Protocol (MCP) query service exposing the knowledge graph for millisecond-latency retrieval, integrated directly into Claude Code for agentic development workflows.
- Worked as an AI-augmented engineer with current AI tools (Claude Code, custom skills, agentic coding workflows), iterating fast on code grounded in clean code principles.
- **Tech stack: Python, LangGraph, LangChain, LiteLLM, MCP, RAG, GraphRAG, React, FastAPI, Postgres, MongoDB, Neo4j, Vector Search, Docker, Kubernetes, Azure**

GenAI Developer (AI Consulting Intern) - Development and Deployment of an Agentic AI Workflow

Covestro Deutschland AG

December 2024 – April 2025 Leverkusen, Germany

- Worked with business stakeholders to understand their decision-making workflows, identified where agentic AI could help, then designed and deployed a LangGraph application that routes each request to vector database queries, general inference or summarization.
- Developed a React front end and a Python back end with FastAPI, using Postman for API testing.
- Built and containerized the entire stack with Docker and deployed it to AWS using CDK, following clean code practices; version-controlled in GitLab with CI/CD.
- **Tech stack: Python, React, FastAPI, LangGraph, LangChain, Postman, Docker, AWS (CDK, EC2, Lambda), GitLab CI/CD**

GenAI Developer (Master's Thesis) - Evaluating the Performance of RAG Systems

Covestro Deutschland AG

May 2024 – November 2024 Leverkusen, Germany

- Automated evaluation of RAG generation and retrieval with RAGAS and PytrecEval, comparing model answers to chemist-provided ground truth.
- Built AWS cloud infrastructure with Lambda, SQS and DynamoDB for PrismaChat RAG evaluation using CDK.
- Benchmarked multilingual embedding models on over 1M chunks of Covestro's internal chemical data.

- Designed RAG pipelines, focusing on chunking strategies, vector databases, indexing and fine-tuning models for optimized retrieval.
- **Tech stack: Python, LangChain, Hugging Face Transformers, RAGAS, PytrecEval, PyTorch, Vector Databases, Azure AI Search, AWS (S3, Lambda, SQS, DynamoDB, CDK), Docker, Streamlit**

Data Scientist (Intern) – ML-Based Prediction of Prepolymer Synthesis Outcomes

Covestro Deutschland AG

November 2023 – April 2024 | Leverkusen, Germany

- Built and compared Random Forest, XGBoost and LSTM (neural network) models to predict prepolymer synthesis outcomes (e.g. viscosity, reaction progression) from time-series process data, evaluating tree-based vs. deep learning approaches for this tabular/temporal hybrid problem.
- Engineered lag features and rolling statistical windows from raw sensor time-series (temperature, reaction time, process variables) for the tree-based models, while feeding raw sequences directly into the LSTM.
- Benchmarked model performance against traditional empirical curve-fitting methods, improving early identification of batches likely to deviate from target specification.
- Deployed an interactive Streamlit dashboard visualizing model predictions to chemists in real time, letting them simulate parameter changes and see predicted outcomes before running physical batches.
- **Tech stack: Python, Scikit-Learn, XGBoost, TensorFlow/Keras, Pandas, NumPy, SciPy, Matplotlib, Streamlit**

Machine Learning Engineer - Electrical Vehicle Load Forecasting using Time Series Analysis

Cognizant Technology Solutions

September 2021 – March 2022 | Hyderabad, India

- Developed ARIMA, SARIMA, XGBoost regressor, FB Prophet and LSTM models for time series analysis of EV load.
- Developed an LSTM neural network that achieved 96% test accuracy with strong performance on unseen data.
- **Tech stack: Python, Scikit-Learn, TensorFlow**

PROJECTS

Project: Next-Best-Offer Engine | Python | SQL | PostgreSQL | Scikit-Learn | Streamlit

- Analytical CRM project on a synthetic insurance portfolio: SQL customer segmentation and features in PostgreSQL, a rule set for cross-selling and upselling and a Scikit-Learn scoring model compared against a rules-only baseline.
- Data visualization in a Streamlit dashboard with segment sizes and the top offer per customer, plus automated data quality checks in Python.

TECHNICAL SKILLSET

- **Data Science & ML:** Python, SQL, Pandas, NumPy, SciPy, Scikit-Learn, XGBoost, neural networks (PyTorch, TensorFlow/Keras), time series (ARIMA, Prophet, LSTM), feature engineering, model evaluation
- **Data & Visualization:** SQL, Azure, Postgres, MongoDB, Neo4j, data ingestion and indexing pipelines, Matplotlib, Streamlit
- **AI & Agents:** LLMs, agentic systems (LangGraph, multi-agent), LiteLLM, LangChain, Hugging Face Transformers, RAG, evaluation (RAGAS, PytrecEval), Claude Code (custom skills, agentic coding)
- **Engineering & Cloud:** FastAPI, Python microservices, Docker, Kubernetes, Azure, AWS (S3, EC2, Lambda, SQS, DynamoDB, CDK), Git, GitLab CI/CD, Agile
- **Languages:** English (Business Fluent), German (B1), Hindi (Fluent), Telugu (Native)

EDUCATION

Master of Science in Artificial Intelligence — March 2022 – April 2025
Technische Hochschule Würzburg-Schweinfurt, Würzburg, Germany

Bachelor of Technology in Mechanical Engineering (Minor in Computer Science & Engineering) — August 2017 – July 2021
G Pulla Reddy Engineering College, Kurnool, India
