Application for Data Scientist (m/w/d)

Dear Hiring Team,

I am writing to apply for the Data Scientist position at LVM Versicherung. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, including predictive models on large volumes of process data and, most recently, a production extraction system that I scored against a ground truth.

Your team turns large, mixed data sources into answers for specific business questions. At Covestro I did that for a chemical process: I built Random Forest, XGBoost and LSTM models on sensor time-series to predict prepolymer synthesis outcomes, engineered lag and rolling-window features, and benchmarked the models against empirical curve fitting. A Streamlit dashboard let chemists see the predictions before running a physical batch. At Cognizant I developed ARIMA, SARIMA, Prophet, XGBoost and LSTM models for EV load forecasting, so forecasting and neural networks are familiar ground.

I write Python and SQL every day. At Kniit I was the only developer of a knowledge-extraction pipeline for German energy-sector documents, with Postgres, MongoDB and Neo4j behind it and a web tool on Azure for the domain experts. I measured every change against a ground truth taken from SAP data, and precision and recall went from 33% and 45% to 93% and 90%. I reported directly to the CTO and owned the work from first analysis to maintenance, which matches how you describe the role.

I have not worked with SAS, and I have not built models for insurance data such as churn or claims. Python, SQL and Azure are where I am strong, and I learn a new tool quickly when the data is in front of me.

LVM interests me because a mutual insurer with more than 125 years behind it has the data and the long horizon to make analysis stick, and because your team supports field and office staff directly, so the results get used. The posting also lists compliance work, and I like analyses that have to be explainable and documented.

I am based in Münster, hold an EU Blue Card and can start on 15 November 2026. I am happy to visit the campus as the posting describes. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
