Application for Technology Analyst - AI, Robotics, IoT

Dear Hiring Team,

I am writing to apply for the Technology Analyst position at Infosys. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I like turning an idea into something a client can try in their hands.

At Covestro I worked as an AI consulting intern. I sat down with business stakeholders to understand how they make decisions, advised them on where agentic AI could help, and then built it: a LangGraph application with a React front end and a FastAPI backend, containerized with Docker and deployed to AWS with CDK. For my thesis I benchmarked embedding models on more than a million chunks of internal data and presented the results against chemist-provided ground truth. Explaining technical work to non-technical people was part of every one of those projects.

Recently I was the sole developer of an agentic knowledge-extraction system at Kniit for the German energy sector. I built the multi-agent pipeline in LangGraph, a graph curation web app that domain experts use to approve changes, and an MCP service that exposes the knowledge graph. I reported to the CTO and worked with SAP experts, so I am used to showing a working system to people who decide whether it is useful. Keeping such a system reliable and up to date is something I did day to day.

An innovation team that shows clients live what AI, robotics and IoT can do is a good fit for how I like to work: I try new tools quickly, I build the first version myself, and I keep it running afterwards. I have not worked with robotics or IoT hardware yet, and I would be learning those parts on the job. My German is at B1 and improving, and I work in English every day.

I am based in Düsseldorf, hold an EU Blue Card, and can start on 15 November 2026. I am comfortable working on site and meeting visiting clients. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
