Application for AI Engineer / KI-Entwickler (m/w/d)

Dear Hiring Team,

I am writing to apply for the AI Engineer / KI-Entwickler position at Finanz Informatik. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and my recent work is close to what your Internal Individual Systems team does: agents, RAG and the integration of AI services into existing systems.

At Kniit I am the only developer of an agentic knowledge-extraction system for the German energy sector, reporting to the CTO. I built multi-agent workflows in LangGraph and an MCP query service that exposes the knowledge graph to other tools with millisecond-latency retrieval, and I connected it to Claude Code. At Covestro I designed RAG pipelines, from chunking and vector databases to model fine-tuning for retrieval, and in my Master's thesis I evaluated them with RAGAS against ground truth from chemists.

On the engineering side, I built a FastAPI backend with a React front end at Covestro, tested the API with Postman, containerized it with Docker and deployed it on AWS through GitLab CI/CD. At Kniit I also built an Expert Interface in which domain experts approve changes, so I am used to explaining AI components to non-technical colleagues and writing down how they work.

I have not worked with LlamaIndex or SharePoint in production, and my RAG and agent work so far has been with LangChain, LangGraph and LiteLLM. The concepts carry over, and I would pick up your stack quickly.

Finanz Informatik runs IT for the Sparkassen-Finanzgruppe, and an internal team that applies AI to its own processes and also advises the business units on using it is a setting where I can be useful from the start.

I am based in Hannover, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent and my German is at B1 level. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
