Application for Junior Consultant AI & MLOps Engineering

Dear valantic team,

I am writing to apply for the Junior Consultant AI & MLOps Engineering position at valantic. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and what I want to get better at is what your team does, getting AI out of the prototype stage and running reliably in production.

My first AI work was classic machine learning. At Cognizant I forecast electric vehicle load with ARIMA, Prophet, XGBoost and an LSTM that reached 96% test accuracy. Later, as a data science intern at Covestro, I built Random Forest, XGBoost and LSTM models that predict the outcome of chemical batches from sensor time series, engineered lag and rolling-window features, benchmarked the models against traditional empirical curve-fitting, and gave them a Streamlit dashboard to test parameter changes before running a batch.

Since then I have worked on the path to production. As an AI consulting intern at Covestro I worked with business stakeholders to understand their decision-making workflows and advised them where agentic AI could help. Then I built the application: a LangGraph application with a FastAPI backend and React frontend, containerized with Docker and deployed to AWS with CDK, with CI/CD in GitLab. At Kniit, a start-up building for the German energy sector, I am the only developer of a knowledge-extraction system and report directly to the CTO. I validated it against ground truth from SAP systems and raised precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume data source I built a deterministic, code-based extraction pipeline that cut a projected $200,000 LLM budget to near-zero recurring cost.

What I have not done yet is run the full MLOps toolchain: experiment tracking, a model registry, automated retraining and drift monitoring. I know why they matter from building automated evaluation against ground truth in my thesis and at Kniit, and I would like to learn them properly in a team with depth in MLOps, LLMOps and AI governance. The mix of classic ML, industrial AI, GenAI and agentic projects at valantic is the breadth I am looking for, and your AI at Scale study shows the same focus on production that drew me to this role.

I will be based in Munich, hold an EU Blue Card and can start on 15 November 2026. My German is at B1 level and I am improving it. I am happy to travel to client sites. Thank you for considering my application. I would be glad to discuss how I could support your clients' AI projects.

Kind regards,

Chandu Prasad Bhairapu
