Application for Forward Deployed Engineer, Agentic Platform (Europe)

Dear Cohere team,

I am writing to apply for the Forward Deployed Engineer, Agentic Platform position at Cohere. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agentic LLM systems built together with the domain experts who use them.

At Kniit, a start-up building for the German energy sector, I am the only developer of an agentic knowledge-extraction system and report directly to the CTO. I own it end to end: ingestion, chunking, prompts, a LangGraph system of parallel agents for entity extraction, relationship analysis, consolidation and reflection, and the indexing behind it. I did not tune it by trial and error. I measured it against ground truth taken from SAP systems and changed prompts and agents until precision and recall went from 33% and 45% to 93% and 90%. For a second, high-volume data source I built a deterministic, code-based pipeline that cut a projected $200,000 LLM budget to near-zero recurring cost.

The work around the model matters as much to me. I built an MCP server that gives Claude Code millisecond-latency access to the knowledge graph, and Expert Interface, a React and Python web app on Azure where SAP experts validate and approve changes to the graph. My Master's thesis at Covestro was about evaluating RAG: I automated the evaluation of answers and retrieval for the PrismaChat system with RAGAS and PytrecEval and benchmarked multilingual embedding models on more than a million chunks.

I have also done the customer-facing part. As an AI consulting intern at Covestro I worked with business stakeholders to understand their decision-making workflows, advised them where agentic AI could help, and built the result: a LangGraph application that routes each request to vector search, inference or summarization, with a FastAPI backend and React frontend, deployed to AWS with Docker and CDK.

North runs agents close to sensitive enterprise data, even in air-gapped environments, for customers such as RBC, Dell and Ensemble Health Partners. That is the kind of work I want to do: agents that are measured against ground truth and checked by the experts who use them. I would like to bring that to your customers in Germany and Europe.

I will be based in Berlin, hold an EU Blue Card and can start on 15 November 2026. I am happy to travel to customer sites. Thank you for considering my application. I would be glad to talk about how I could help your customers ship agents.

Kind regards,

Chandu Prasad Bhairapu
