Application for Forward Deployed Engineer

Dear elunic team,

I am writing to apply for the Forward Deployed Engineer position at elunic. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and I like the part of your posting where a problem is described on Tuesday and something people can try exists by Friday.

At Kniit, a start-up working for the German energy sector, I am the only developer of an agentic knowledge-extraction system and report directly to the CTO. I build first versions with Claude Code, custom skills and agentic coding workflows, which is how one person could take the system from raw documents to a multi-agent LangGraph pipeline, an MCP service and a review app for domain experts. Measured against ground truth from SAP systems, precision and recall rose from 33% and 45% to 93% and 90%.

The decision I would defend in front of a customer is the one I made for a second, high-volume data source. An agent was possible, but plain code was the better answer: the deterministic pipeline cut a projected $200,000 LLM budget to near-zero recurring cost and pushed accuracy toward 100%. As an AI consulting intern at Covestro, I also sat with business stakeholders, learned how they made decisions day to day, advised them on where an agentic setup could help, and then built it with LangGraph, FastAPI and React, deployed to AWS.

eluna puts agents into service, sales and operations work at industrial SMEs, and my own work has been with industrial and energy-sector data at Covestro and Kniit. I would like to be the person who comes back from the customer meeting with a first version.

I am based in Munich, hold an EU Blue Card and can start from 15 November 2026. I am happy to travel to customer sites. My English is business fluent and my German is at B1; I am actively improving it. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
