Application for AI Research Engineer

Dear Hiring Team,

I am writing to apply for the AI Research Engineer position at Joblet-AI. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a focus on measuring how well LLM systems actually perform.

Evaluation has been part of my work since my Master's thesis at Covestro. I built an automated framework that scored RAG generation and retrieval with RAGAS and PytrecEval against ground truth provided by chemists, and benchmarked multilingual embedding models on more than a million chunks of internal data. At Kniit I did the same for a multi-agent extraction pipeline in LangGraph. I measured every change against ground truth derived from the customer's SAP system, which moved precision and recall from 33% and 45% to 93% and 90%.

Looking at failure modes is how I improved that pipeline. I compared the agents' output with the ground truth, found where entities and relationships were missed, and changed the prompts and the agent split until the gaps closed. For a second, high-volume source I replaced the LLM step with a deterministic pipeline, which cut a projected $200,000 LLM budget to near zero. I also fine-tuned open-source LLMs with QLoRA and fine-tuned models for retrieval, so I have seen the training side of the loop too.

I write Python every day and build the tooling around it: an MCP query service that exposes a knowledge graph to agents, FastAPI services, and a React curation tool for domain experts. I use Claude Code with custom skills in my daily engineering work, which gives me a user's view of what coding agents get right and where they break. I have not worked with reinforcement learning or C++, and I have not yet designed a public coding benchmark.

Your posting describes owning how frontier coding models are measured, with rubrics, golden examples and reproducible protocols. That is the part of AI work I enjoy most, and it is why I am applying.

I am based in Germany, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
