Application for AI Engineer, Agents

Dear Hiring Team,

I am writing to apply for the AI Engineer, Agents position at SoccerSolver. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently multi-agent systems that run on real documents and are judged against ground truth.

At Kniit I was the sole developer of an agentic knowledge-extraction pipeline for the German energy sector. I built the LangGraph agents (entity extraction, relationship analysis, consolidation, reflection) and measured them against ground truth from the SAP system, which moved precision and recall from 33%/45% to 93%/90%. For a second, high-volume source I replaced the LLM calls with deterministic code, so a projected $200,000 LLM budget dropped to near-zero recurring cost. That taught me to use an agent only where it earns its cost.

I also built an MCP query service that exposes the knowledge graph to agents with millisecond-latency retrieval, and connected it to Claude Code. A graph curation web app (React, Python microservices, Azure) let domain experts approve or reject changes before they went in, so a person stayed in the loop. At Covestro I deployed a LangGraph agent with a FastAPI backend on AWS using CDK and GitLab CI/CD, and for my thesis I evaluated RAG systems with RAGAS and PytrecEval and benchmarked embedding models on over 1M chunks.

Messy sources are familiar to me: complex regulatory and technical documents at Kniit and internal chemical data at Covestro both needed careful ingestion and cleaning before any model could use them. My earlier work on time-series forecasting gives me a statistics and ML base for the optimization side of your decision agents. I do not yet have football-specific experience, and I would learn the domain by working with your public data.

I like that SoccerSolver puts agents on real parts of the business, with approval queues and cost per run, and asks candidates to prove it with a working agent. The partner model fits how I worked at Kniit, where I owned the pipeline from ingestion to deployment.

I am based in Germany, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
