Application for Applied AI Engineer

Dear Hiring Team,

I am writing to apply for the Applied AI Engineer position at Moss. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently agentic systems that sit inside a larger Python backend.

At Kniit I was the sole developer of a multi-agent LangGraph pipeline that extracts knowledge from regulatory documents for the German energy sector. I measured it against ground truth from SAP systems and raised precision and recall from 33%/45% to 93%/90%. I also built an MCP query service on top of the knowledge graph and plugged it into Claude Code, and a React and Python expert interface on Azure where domain experts approve or reject changes before they go in. That human review step is the kind of control I expect in financial workflows.

Evaluation has been a constant in my work. In my Master's thesis at Covestro I automated RAG evaluation with RAGAS and PytrecEval against chemist-provided ground truth and benchmarked multilingual embedding models on over a million chunks. At Kniit the same habit decided which approach we kept: agents where they paid off, plain deterministic code where they did not, which removed a projected $200,000 LLM budget. At Covestro I also shipped an agentic LangGraph application with FastAPI, Docker and AWS CDK, working with business stakeholders on their decision-making workflows.

Moss caught my attention because your agents already handle categorization and reconciliation at volume, while customers keep visibility and control over each step. I would like to work on that balance between automation and oversight. I have not used Google ADK or Kafka in production, and I have worked on AWS and Azure rather than GCP, but orchestration frameworks and cloud platforms are something I pick up quickly.

I am based in Munich, available from 15 November 2026 and hold an EU Blue Card. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
