Application for Data Engineer (m/w/d)

Dear Hiring Team,

I am writing to apply for the Data Engineer position at CGI. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of a data and extraction pipeline for the German energy sector.

At Kniit I owned that pipeline from ingestion and chunking to indexing, and reported directly to the CTO. For a second, high-volume source stream I replaced LLM calls with a deterministic, code-based extraction. That cut a projected LLM budget of $200,000 to near-zero recurring cost. For the agentic part I raised precision and recall from 33%/45% to 93%/90%, measured against ground truth taken from the SAP system. I also built an expert interface on Azure so domain experts can check and approve changes, which keeps data quality under control.

On the ML and operations side, my thesis and internships at Covestro covered the full cycle. I built AWS infrastructure with CDK (Lambda, SQS, DynamoDB) for RAG evaluation, containerized a LangGraph application with Docker and shipped it through GitLab CI/CD. As a data science intern I engineered features from sensor time series, compared XGBoost and LSTM models, and put the predictions into a Streamlit dashboard that chemists used before running physical batches. Python and SQL are my daily tools, and I have worked in agile teams with data scientists, domain experts and business stakeholders.

I have not yet used Spark, Databricks or Azure Data Factory on the job. I know the pipeline concepts behind them and have designed a Databricks and PySpark medallion pipeline for a practice project, so I expect to get productive on that stack quickly.

CGI's work in aviation and retail appeals to me because the data there has direct effects on how customers travel and shop. I also like that you describe Data Engineering as the base for analytics and ML use cases, since that is how I approach pipelines. Working close to the client at the home location suits me too.

I am based in Kaiserslautern, hold an EU Blue Card and could start on 15 November 2026. I am happy to travel to client sites. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
