Application for AI Application Expert (all genders), Dormagen

Dear Bayer recruiting team,

I am writing to apply for the AI Application Expert position at the Bayer Crop Science site in Dormagen. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, including machine learning on chemical production data and generative AI tools that domain experts use in their daily work.

My closest match to this role is my time at Covestro in Leverkusen. As a data science intern I built Random Forest, XGBoost and LSTM models that predict prepolymer synthesis outcomes such as viscosity from time-series process data. Benchmarked against empirical curve fitting, the models flagged batches likely to go off-spec earlier, and I gave the chemists a Streamlit dashboard to try parameter changes before running a physical batch. Later, as an AI consulting intern, I sat with business stakeholders to understand how they made decisions, advised where agentic AI could help and then built and deployed the application myself, with Docker and AWS CDK as infrastructure as code and GitLab CI/CD.

At Kniit, a start-up for the German energy sector, I was the only developer of an agentic knowledge-extraction system and reported directly to the CTO. I built the data pipelines into a Neo4j knowledge graph and checked data integrity against a ground truth derived from SAP systems; precision and recall rose from 33% and 45% to 93% and 90%. Domain experts approve every change in a review app I built on Azure, which is how I think AI should be introduced on a site: people keep the final decision. I also learned when not to use an LLM: a code-based pipeline for a high-volume data stream cut a projected $200,000 LLM budget to near zero.

Dormagen interests me because the work sits between data and real production plants, and because the role is built around a Digital Roadmap for the site. My mechanical engineering degree and the Covestro work mean I am used to working with chemists on process data.

I will be based in Köln, hold an EU Blue Card and can start on 15 November 2026. My English is business fluent and my German is B1, which I am actively improving. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
