Application for AI Systems and Automation Engineer (m/f/d)

Dear Hiring Team,

I am writing to apply for the AI Systems and Automation Engineer position at enmacc. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most recently as the sole developer of an agentic system for domain experts, from first prototype to a running web application.

At Kniit, a start-up in the German energy sector, I owned the knowledge-extraction pipeline alone and reported directly to the CTO. Four LangGraph agents work in parallel on entities, relationships, consolidation and reflection. Measured against ground truth derived from SAP data, precision and recall rose from 33% and 45% to 93% and 90%. For a second, high-volume data stream I replaced the LLM calls with deterministic code and cut a projected LLM budget of $200,000 to near zero. That is the judgement your posting asks for: use a model where it helps and plain code where reliability matters.

I have built an MCP server that exposes the knowledge graph as tools, and Claude Code queries it in milliseconds. I use Claude Code, custom skills and agentic coding workflows every day. My backends are Python with FastAPI and microservices, backed by Postgres, MongoDB and Neo4j, containerized with Docker and deployed on Azure and Kubernetes. At Covestro I shipped a FastAPI and React application in Docker on AWS with CDK and GitLab CI/CD. I have not worked professionally in TypeScript, Java or Go, and I would pick up your stack quickly.

I like working directly with the people who own a process. At Covestro I talked with business teams about how they make decisions and built an agentic workflow around that. At Kniit I built the Expert Interface, a web app where SAP experts review and approve what the pipeline produces. Replacing spreadsheet and form workflows with proper services for onboarding and operations is work I want to do more of.

enmacc interests me because it replaces manual processes in energy trading with a platform that more than 2,400 traders rely on, and your Platform team puts LLMs into customer onboarding and KYC flows where mistakes cost real money.

I am based in Munich, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
