Application: Decision Intelligence Analyst

Dear Aily Labs Team,

I am writing to apply for the Decision Intelligence Analyst position at Aily Labs. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, and the part of the work I care about most is the one this role is built around: making sure an AI system keeps giving good answers once real people rely on it.

At Kniit GmbH I am the only developer on an AI system for the German energy sector. I prepare and structure regulatory and technical documents, run a multi-agent model over them and load the results into a knowledge-graph data model. I track the quality against ground truth from SAP systems, and over several optimization cycles I raised precision and recall from 33% and 45% to 93% and 90%. For a second, high-volume data stream a deterministic pipeline brought a projected $200,000 LLM budget down to almost no running cost.

Understanding how people make decisions was the core of my second internship at Covestro, which was an AI consulting role. I worked with business stakeholders to understand their decision-making workflows, advised on how AI could support them, and then built and deployed the solution on AWS. In an earlier internship I built a dashboard for chemists so they could test parameter changes before running a batch.

My master's thesis at Covestro was about validation: I evaluated a RAG system with RAGAS and PytreEval against answers written by chemists, benchmarked embedding models on more than a million chunks of internal data and fine-tuned models for retrieval. On my own I fine-tuned an Open Llama 3B model with QLoRA. I have not yet worked across many client tenants at once, but owning one system's quality end to end is the core of that work, and I would build on it with your delivery team.

Aily's Super Agent brings together agents for finance, supply chain, manufacturing and R&D, with a strong focus on pharma and life sciences. After a year and a half in the chemical industry at Covestro I know how much those decisions depend on good data and on trust in the model, and I would like to help your clients get there.

I will be based in Munich, hold an EU Blue Card and can start from 15 November 2026. I am happy to work from the office or remotely, and my German is at B1 level.

Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
