Application for Data Engineer - AI Pipelines & DataOps

Dear Hiring Team,

I am writing to apply for the Data Engineer - AI Pipelines & DataOps position at Intersnack IT KG. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, with a good part of that time spent on the data pipelines underneath them.

At Kniit I was the sole developer of the ingestion and indexing pipeline for a knowledge-extraction system in the German energy sector: data ingestion, chunking and indexing into a knowledge graph on Azure, with Python microservices, FastAPI, Docker and Kubernetes. I measured the output against ground truth from the SAP system, which is how precision and recall went from 33

Before that I worked with sensor data. As a data science intern at Covestro I built lag features and rolling windows from process time series and fed them into Random Forest, XGBoost and LSTM models, and at Cognizant I worked on electric vehicle load forecasting. In my Master's thesis I benchmarked embedding models on more than one million chunks, and ran the evaluation on AWS with Lambda, SQS and DynamoDB, deployed with CDK. In the consulting internship I deployed a FastAPI and LangGraph application to AWS with Docker and GitLab CI/CD.

I have not run Kafka, Spark or Azure Data Factory in a production job, and I have not worked with OT or edge devices directly. My Azure, AWS, Postgres and Docker experience should carry over, and I would pick up the rest quickly.

Intersnack stood out because the role sits in the AI programme and treats data quality and observability as the base for every AI use case, across 45 production sites. Making that base reliable is the kind of work I want to do next.

I am based in Düsseldorf, hold an EU Blue Card, and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
