Application for Backend Developer (m/w/d) Service & Integration

Dear Hiring Team,

I am writing to apply for the Backend Developer (m/w/d) Service & Integration position at GWS. I have a Master's in Artificial Intelligence and three years of experience building and deploying AI applications, most of it as the Python backend behind them: APIs, data pipelines, containers and cloud deployment.

At Kniit I was the sole developer of a knowledge-extraction system for the German energy sector, reporting to the CTO and working with SAP domain experts. I built the Python microservices behind its curation web app on Azure and a Model Context Protocol service that serves the knowledge graph with millisecond latency. When error analysis showed that LLM calls were too costly for a high-volume source, I replaced them with a deterministic pipeline and cut a projected $200,000 LLM budget to near-zero running cost. That habit of tracing a problem to its cause and fixing it for good is what your posting asks for.

At Covestro I wrote a FastAPI backend with a React front-end, containerised it with Docker and shipped it to AWS with CDK and GitLab CI/CD. I also sat down with business stakeholders to understand how they make decisions before writing any code, which is close to working between customers, consulting and development. Earlier I used Pandas and Scikit-Learn to turn sensor data into prediction models for chemists.

I have not worked with Django, OAuth or Shopware yet. I do know Python, PostgreSQL, Docker, Kubernetes and Git workflows well enough to start contributing quickly, and I learn new frameworks fast.

GWS appeals to me because you build ERP and B2B e-commerce software for the technical wholesale trade and look after your customers over many years, which means the service cases you describe feed straight back into the product. Improving a system that real customers depend on is the work I want.

I am based in Münster, hold an EU Blue Card and can start on 15 November 2026. Thank you for considering my application.

Kind regards,

Chandu Prasad Bhairapu
